

e-Suite

Highlight Feature

- > It allows you to track and control copy, fax and scan jobs, and perform secure print release at Toshiba MFP.
- > It allows you to tackle ineffective use of resources due to unnecessary administration and printing.
- > It allows you to tackle inaccurate chargeback to various departments due to unaccounted print usage by unknown users.
- > It allows you to have complete control and manage your entire printing system in your organisation while enhancing security, reducing overhead costs.

Your Challenge

It is observed that the IT staff/key users would spend significant amount of time to fix the printing issues, order consumables such as toners, or submit meter reading. Such activities have occupied their time which could be used to focus on their core job responsibilities.

Very often, anyone could see unclaimed printed documents sitting on the MFP's output tray when he/she walks past. Not only it is a waste of money but it also poses a security issue. Worse still, it would be a nightmare when some confidential documents are misplaced or someone accidentally picked them up from an unauthenticated MFP.

Some users may tend to overlook and print their internal documents such as emails, notes or drafts in colour even though it is not required. As a result, there is a lack of control which lead to significant expenditure on unnecessary colour print-outs which cost more than the black and white print-outs.

It is also observed that most users still adopt a local printer approach instead of sending their print jobs of confidential information to a MFP. This creates a larger print estate, and increases the business overhead costs.

Our Solution

With the integration of Toshiba e-Suite via its e-Bridge Open Platform Technology, Toshiba MFPs provide a user-friendly embedded user interface for secure print release, copy, scan, fax and card registration to all individual users. The users could view their individual quota balance of black/white and colour prints, this would help them to carry out their print activity more effectively.

Its powerful device management feature enables the administrator to discover Toshiba MFPs in the network and configuring/adding to managed device list at ease.

In addition, Toshiba e-Suite would serve as a medium to capture logs and counters from its MFPs. These reports give an insight of usage pattern of Users and MFPs.

Your benefits

> Ease of Management

- Toshiba e-Suite provides a single web administration interface which enables user & device management. This reduces the overall management time and allows employees to focus on their core job responsibilities more efficiently and more effectively.

> Security

- The pull printing (eFollow) feature brings information security of an organisation to a higher level and eliminates information theft.
- The feature allows all registered users print from any e-Suite enabled MFP. This means that only registered users could authenticate at Toshiba MFP successfully. This reduces the chance of missing/uncollected print-outs and waiting time.

> Cost Transparency

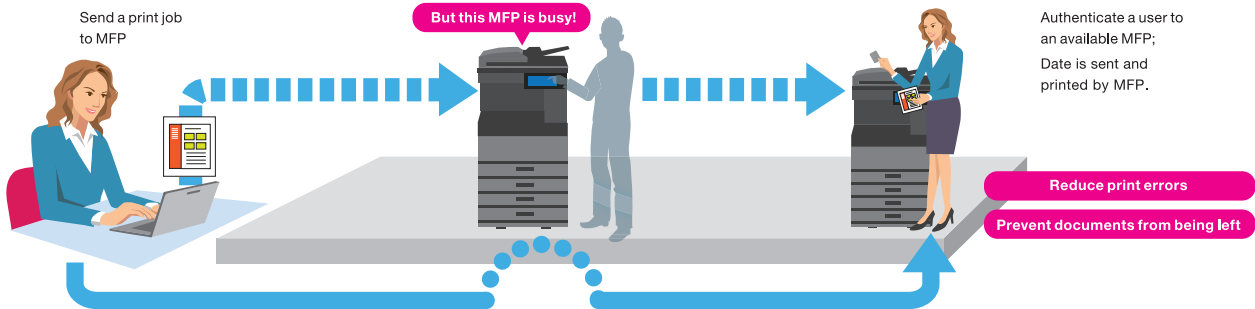

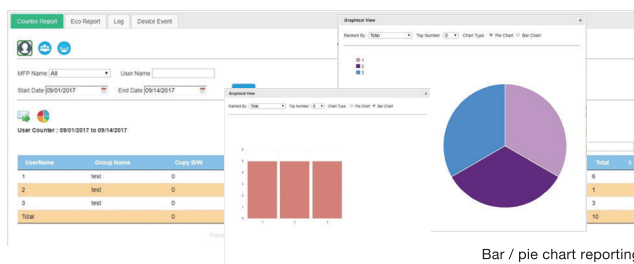

- The MPS implementation allows the customers to have easy and simple control over all their document output, with a reporting mechanism providing greater visibility of their overall printing expenditures.

> Optimisation

- The floor plan feature allows the customers to have an overview of their print fleet with one glance, thereby creating a right sized print estate. This would help the customer to deploy a right solution fit to be used in the right place and at the right time. With that, the customer could minimise costs and achieve an excellent return on investment.

Where to use

Toshiba e-Suite could be implemented from small offices to medium-sized enterprise customers from various verticals such as retail, logistics, education, oil and gas, healthcare, banking and financial services, accounting, pharmaceutical and government.
